# Services

## Hull cleaning & barnacle removal

Our hull cleaning and barnacle removal service includes thorough underwater scraping and brushing to remove barnacles, algae, and marine growth. We use marine-grade cleaning pads and non-abrasive tools to clean the hull, propellers, shafts and trim tabs, ensuring effective cleaning while protecting your anti-fouling coating.

## Underwater vessel inspections

Our underwater vessel inspections identify hull damage, corrosion and fouling issues below the waterline. Skilled divers conduct thorough assessments and provide detailed photo reports with diver commentary, enabling timely maintenance decisions that protect your vessel's value, enhance safety, and help prevent expensive repairs.

## Waterline wash

We clean the waterline to remove stains, slime, and salt build up, improving your boat's appearance and preventing corrosion. Regular washing maintains your vessel's finish and keeps it looking its best.

## Wash & wax

Our comprehensive boat wash and wax service thoroughly cleans your vessel's exterior, removing dirt, salt, and contaminants. We then apply a high-quality marine wax to protect surfaces from UV damage and oxidation, enhancing shine and preserving your boat's finish for long-lasting beauty and durability.

# Services

## Sacrificial anode replacement

We replace sacrificial anodes that protect your boat's metal parts from corrosion by attracting harmful electrical currents that cause rust. These anodes gradually wear away instead of your hull, propeller, or fittings, helping to extend the life of your vessel's components and prevent costly damage.

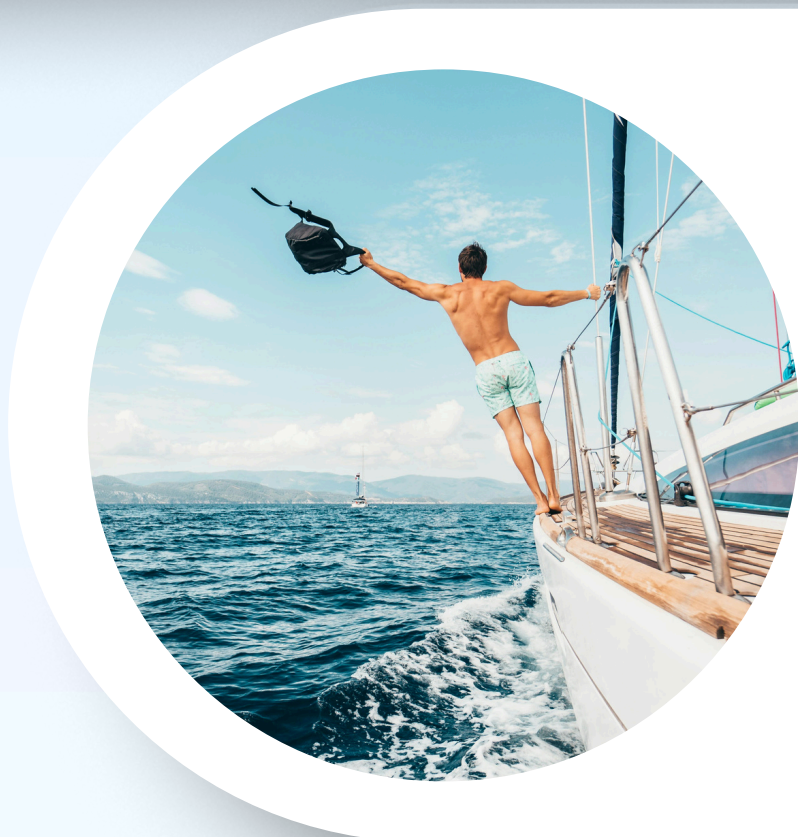

## In-water propeller replacement

Our propeller replacement service offers fast, efficient prop removal and installation without the need for costly haul-outs. Skilled divers perform the work safely underwater, minimizing downtime and ensuring your vessel maintains optimal performance with minimal disruption to your schedule.

## Regular maintenance plans

A regular maintenance plan ensures your boat stays in top condition with scheduled cleanings and inspections. It helps prevent costly repairs and improves performance. It includes an underwater vessel inspection (including report), hull cleaning & barnacle removal, a waterline wash and an exterior wash & wax top-side.

## Mooring inspections & maintenance

Mooring maintenance services includes the inspection, adjustment, and replacement of mooring components such as chains, shackles, ropes, risers, and buoys. This ensures your vessel remains securely and safely moored, helping to prevent drift, damage, or failure due to wear or corrosion.

# Locations

Nestled south of Sydney, the Port Hacking River is a sheltered, picturesque waterway known for its natural beauty and vibrant boating community. Our service area includes Gunnamatta Bay, Dolans Bay, Burraneer Bay, Gymea Bay, Yowie Bay, Grays Point, Kareela Bay, Port Hacking, Little Turriel Bay, and Pirrama Bay, as well as surrounding inlets and estuaries.

Flowing through Sydney's south-west, the Georges River is lined with leafy suburbs, quiet anchorages and meandering creeks. We cover areas including Como Bay, Oyster Bay, Kangaroo Point, Lugarno, Sandy Point, Picnic Point, Alfords Point, Gungah Bay, Lime Kiln Bay, and the surrounding creeks, inlets, and tributaries within the Georges River waterway.

At the heart of the city, Sydney Harbour blends world-famous landmarks with constant marine activity. Our service area includes Darling Point, Lavender Bay, Balls Head Bay, Mosman Bay, Neutral Bay, Elizabeth Bay, Double Bay, Rose Bay, Rushcutters Bay, Longueville, and nearby coves and inlets throughout Sydney Harbour.

Nestled between Sydney's North Shore and surrounding bushland, Middle Harbour features deep, sheltered waters that provide ideal conditions for mooring and protected boating. Our service area includes Seaforth, Clontarf, The Spit, Castlecrag, Northbridge, Sailors Bay, Sugarloaf Bay, Bantry Bay, Pearl Bay, and the surrounding bays, inlets, and mooring zones throughout Middle Harbour.
